Contents

Preface	
<i>Jiayang Sun, Anirban DasGupta, Vince Melfi and Connie Page</i>	v
Contributors to this volume	
<i>.</i>	vii
PROBABILITY, BAYESIAN INFERENCE AND STOCHASTIC PROCESS	
Group invariant inferred distributions via noncommutative probability	
<i>B. Heller and M. Wang</i>	1
Invariance principles for fractionally integrated nonlinear processes	
<i>Wei Biao Wu and Xiaofeng Shao</i>	20
Random walk on a polygon	
<i>Jyotirmoy Sarkar</i>	31
CONTEMPORARY SEQUENTIAL ANALYSIS	
Bias correction and confidence intervals following sequential tests	
<i>Tze Leung Lai, Zheng Su and Chin Shan Chuang</i>	44
Multivariate sequential analysis with linear boundaries	
<i>Robert Keener</i>	58
Corrected confidence intervals for secondary parameters following sequential tests	
<i>R. C. Weng and D. S. Coad</i>	80
Efficient three-stage t-tests	
<i>Jay Bartroff</i>	105
BIASED SAMPLING, MEASUREMENT ERROR MODELS AND RESTRICTED INFERENCE	
On the behavior of Bayesian credible intervals for some restricted parameter space problems	
<i>Éric Marchand and William E. Strawderman</i>	112
Sieve estimates for biased survival data	
<i>Jiayang Sun and Bin Wang</i>	127
Existence of the signal in the signal plus background model	
<i>Tonglin Zhang</i>	144
A test for equality of multinomial distributions vs increasing convex order	
<i>Arthur Cohen, John Kolassa and Harold Sackrowitz</i>	156
NONLINEAR RENEWAL THEORY	
Nonlinear renewal theorems for random walks with perturbations of intermediate order	
<i>Keiji Nagai and Cun-Hui Zhang</i>	164
A non-linear Renewal Theorem with stationary and slowly changing perturbations	
<i>Dong-Yun Kim and Michael Woodroffe</i>	176
MULTIPLE TESTING, FDR, STATISTICS IN IMAGING AND DATA MINING	
On the false discovery rates of a frequentist: Asymptotic expansions	
<i>Anirban DasGupta and Tonglin Zhang</i>	190
Spatial-temporal data mining procedure: LASR	
<i>Xiaofeng Wang, Jiayang Sun and Kath Bogie</i>	213

Preface

There have been extensive developments recently in modern nonparametric inference and modeling. Nonparametric and semi-parametric methods are especially useful with large amounts of data that are now routinely collected in many areas of science. Probability and stochastic modeling are also playing major new roles in scientific applications.

This refereed special volume highlights challenges and developments at this interface of statistics, probability and the sciences, and honors Michael B. Woodroffe for his pioneering contributions to nonparametric inference and probability.

Topics covered include biased sampling and missing data, shape-restricted inference, contemporary sequential analysis, modern nonparametric inference, probability, and statistics applications. Some of the papers in this volume were presented at “A Conference on Nonparametric Inference and Probability with Applications to Science”, September 24–25, 2005, at Ann Arbor, Michigan:

<http://www.stat.lsa.umich.edu/conference/mw2005/>

for which there were 97 pre-registered participants. The conference was organized by Robert Keener and Jiayang Sun. Invited Speakers and participants included: Persi Diaconis, Robert Keener, Steve Lalley, T.L. Lai, Mario Mateo, Mary Meyer, Vijay Nair, Gordie Simons, Jiayang Sun, Michael Woodroffe, Wei Biao Wu, Cun-Hui Zhang, Charles Hagwood, Steve Coad, Hira Koul, Anand Vidyashenkar, Zhiliang Ying, Arniban DasGupta, Moulinath Banerjee, Anna Amirdjanova, Bill Strawderman, Connie Page, Tom Sellke, Byron Roe, Vince Melfi, and Herman Chernoff.

Michael Woodroffe has had a distinguished career and is widely recognized as a pre-eminent scientist in statistics and probability. He has broad interests and has made deep and significant contributions in many areas, many represented by sessions at this conference. His work in probability, sequential analysis and inference is regarded as seminal and pioneering and has influenced an entire generation of researchers. He has published more than 100 research articles, written a SIAM monograph, and authored a book. He is a former Editor of the *Annals of Statistics*, a member of Phi Beta Kappa, and a fellow of the Institute of Mathematical Statistics and an elected member of the International Statistical Institute.

We thank the National Science Foundation, the National Security Agency, and the University of Michigan, (the Department of Statistics; the College of Literature, Science, and the Arts; the Office of the Vice President for Research; and the Rackham Graduate School) for their financial support to the conference, and the Institute of Mathematical Statistics, and the American Statistical Association for the co-sponsorship. We also thank Amy Rundquist for conference administration.
